## Research

### *Research and Teaching Interests (undergraduate and graduate)*

Origins of state capacity and public administration, decentralization, state formation, comparative political economy, political development, Latin American politics, causal inference, experimental methods and statistical methods.

### *Dissertation*

My dissertation argues that sectoral economic conflicts fostered state-building in Latin America. Using fine-grained historical case study comparisons, sectoral outputs from 1900 to the present, panel data and time-series econometric techniques, and a novel earthquake dataset (to measure state capacity), I find that industrial expansion altered the post-colonial political balance, thus putting heavy pressures for the implementation of tax institutions. In turn, fiscal expansion fostered both political development and economic growth.
