Dissertation

My dissertation argues that the modernization of the fiscal apparatus in Latin America was the product of an inter-elite sectoral conflict process between the agricultural and industrial classes. Using fine-grained historical case study comparisons, sectoral outputs from 1900 to the present, time-series econometric techniques and a novel earthquake dataset (to measure state capacities), I find that industrial growth altered the political and military balance, endangering the political monopoly the traditional sector had inherited after the colonial period. In turn, the development of fiscal institutions transformed the entire political and economic structures, mobilizing a series of investments in state-institutions, in a way that differs entirely from modernization theory.
